

Project Design Phase
Proposed Solution Template

Date	13 July 2026
Team ID	N/A
Project Name	HouseHunt – Smart Real Estate Rental Platform
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Finding suitable rental properties is often time-consuming and inconvenient. Existing platforms may lack integrated features such as visit scheduling, wishlist management, owner communication, and location visualization, making the rental process less efficient for both tenants and property owners.
2	Idea / Solution Description	HouseHunt is a full-stack web application that simplifies property searching and management. It enables users to register, log in securely, search and filter properties, view detailed information with Google Maps integration, save favorite properties to a wishlist, schedule visits, communicate with owners through Email and WhatsApp, and provide ratings and reviews. Property owners can add, update, and delete listings, manage visit requests, and monitor their properties through a personalized dashboard.
3	Novelty / Uniqueness	The platform combines multiple essential features in one application, including property management, smart search and filters, Google Maps integration, wishlist functionality, visit scheduling, owner communication, reviews and ratings, and a personalized dashboard. These integrated features provide a seamless and user-friendly rental experience.
4	Social Impact / Customer Satisfaction	The project helps users find rental properties quickly and efficiently while allowing property owners to manage listings with ease. Features such as visit scheduling, direct communication, and transparent reviews improve trust, save time, and enhance customer satisfaction.
5	Business Model (Revenue Model)	Revenue can be generated through premium property listings, featured advertisements, subscription plans for property owners, promotional property placements, partnerships with real estate agencies, and advertising services related to housing, moving, and home loans.
6	Scalability of the Solution	The application is designed using the MERN stack, allowing it to scale for a larger number of users and properties. Future enhancements can include AI-based property recommendations, online rent payments, chat functionality, admin dashboards, mobile applications, cloud deployment, and integration with real estate agencies across multiple cities or countries.
